About Me

Dedicated and highly passionate individual who thrives upon seeking new challenges through my career as a Business Analyst. My initial years of working in the business industry push me to go further in discovering more things in it. Motivated to join a group of seasoned and experienced Business Analyst professionals in the industry respectively to drive data-driven strategies and operational efficiency

Skills

- Data Visualization (Power BI, Excel)
- Data Analytics & Research
- Statistical Modeling (Linear & Logistic Regressions)
- SQL Database Management
- Python Data Analysis (Pandas, NumPy)
- Problem Solving & Critical Thinking
- Brainstorming & Solution Design
- Process Automation (Python, JavaScript)
- Time Management
- Teamwork & Independent Execution

Experiences

- **Data Analyst (Remote) | Systems Limited** *June 2023 – July 2025*
 - Lahore, Pakistan (Remote from Riyadh, Saudi Arabia) | June 2023 – July 2025
 - Dashboard Development: Designed and deployed interactive Power BI dashboards to track key performance indicators (KPIs) across regional operations, improving management reporting efficiency by 25%.
 - Data Extraction & Engineering: Wrote and optimized complex SQL queries to extract, join, and clean millions of rows of raw operational data from relational databases.
 - Statistical Analysis: Applied linear and logistic regression models using Python (Pandas, NumPy) to analyze customer behavior trends and forecast quarterly operational demands.
 - Process Automation: Developed logic-based Python scripts to automate redundant weekly Excel reporting tasks, saving the department roughly 10 hours of manual work per week.
 - Cross-Functional Collaboration: Partnered with software development teams during the SDLC to validate data structures and successfully led User Acceptance Testing (UAT) for a new internal inventory tracking tool.

Education

- | | |
|-------------------------------------|-------------|
| University of Malakand | <i>2025</i> |
| • Bachelor of IT | |
| Vision Polytechnic Institute | 2019 |
| • DAE(Electrical | |

Academic Projects

Crop Yield Prediction & Analytics (BS IT Final Year Project)

- **Predictive Modeling:** Developed and trained a high-accuracy Machine Learning predictive model in Python to forecast regional crop yields based on complex environmental, soil, and historical climate datasets.
- **Data Preprocessing:** Utilized Pandas and NumPy to clean raw agricultural data, handle missing values, and perform feature scaling.
- **Statistical Regressions:** Implemented linear and logistic regression algorithms (via Scikit-Learn) to analyze variable correlations and evaluate model accuracy metrics.
- **Insights Visualization:** Generated data visualizations to present predictive model insights clearly, bridging the gap between complex data and practical agricultural planning.

Certificates

- Certified Document Controller – Hiqua
- Web Development Certification – NFTP (National Freelance Training Program)
